The days of old school fishing no longer exists in the world today and now it has become all about having the latest and most innovative piece of technology to help you in your fishing endeavors. In the old days, people never thought about what technological gadgets they were going to need to bring on board with them to help catch fish. However, today just about anyone who fishes, whether infrequently or daily, has at least the basics. The basics include some type of GPS fish finder and/or chart plotter to assist in their journey.

For any sailor or fisherman, it is always still a good idea to have an updated paper version of a chart plotter on board, but it is difficult to keep up with this when there are so many choices of different GPS fish finders and other electronic navigation devices. There are two different ways that sailors can display electronic navigation charts; on waterproof chart plotters or on a personal laptop. Lately, it seems that the choice of methods is directly related to the size of boat they are traveling on and what length and types of trips they are taking. People who have boats that are smaller than fifty feet have been favoring the electronic chart plotters.

The sailors or seafarers who have larger crafts that provide them with more room and overall protection from the natural elements may choose to use a laptop. The way the charts on chart plotters work is they are created through a memory card that is inserted into a Global Positioning System unit. This allows them to have a clear view of where they are at the current moment and even more so, where they want to go and the best route to take to get there.

There are many varieties of these electronic chart plotters to choose from so it is important to know what you are looking for before setting out on your search. Almost all of these products provide premium charts that display real pictures with three dimensional and satellite images. Some of the fancier, high end systems are equipped with touch screens as opposed to buttons to make it easier and more efficient to use. Ultimately, it does not matter which model you

choose, but it is important to figure out which device you need. Chart  
plotters are a great idea for anyone who travels on a boat, but the  
package is really not complete without a GPS fish finder. A GPS fish  
finder is guaranteed to revolutionize your approach to fishing and  
improve the sport as a whole.
